

BrightWeb Learning Hub – Website Planning Documentation

Comprehensive planning documentation for the BrightWeb Solutions Educational Site project, prepared as part of the client brief response.

1. Importance of Planning

The cohesive and structured planning of the BrightWeb Solutions educational website is important to meet both client expectations and user needs. This document has been created to provide structure, direction, and clarity to the design and development process of the BrightWeb Learning Hub.

2. Ideas Generation

The website's creative direction has been tailored for BrightWeb's need for a visually engaging and accessible educational platform. The initial of this project focused on utilising a modern layout with clear navigation and accessible colour choices. Inspiration was drawn from other minimalist educational platforms like W3CSS and Elatt Learning, in addition to BrightWeb's own brand values.

Key Ideas:

- Layout - A clean, simple bento-style layout for a modern and organised appearance.
- Navigation - Clear and intuitive, ensuring users can reach any page within 1-2 clicks.
- Colours and Fonts – Following the 60-30-10 colour design rule, using BrightWeb's brand palette: white (#F5F5F7), green (#84BF2A), black (#21191D), and lime (#CFF250).

3. Sitemap

The sitemap below outlines the site's logical structure and content flow. The main sections include: Home, Types of Websites, and Design Principles (Each section branches to relevant subpages offering educational examples and resources).

4. Wireframes

Below is a low-fidelity digital drawing of the Website Example, and Design Principles, Types of Websites. The drawings outline each page's structure, content placement, and interaction elements.

5. Layout Structure

The layout will use a simple block system using “w3-row” and “w3-col” to create a clean and responsive grid design, with balanced spacing and a clear visual hierarchy.

6. Storyboarding

The storyboard below illustrates the user’s journeys on BrightWeb Learning Hub. Trainees explore website types, watch instructional videos, and read the relevant training materials.

7. Moodboards

The Moodboard below features BrightWeb's signature colours, clean typography, and imagery representing learning and digital innovation. The website's tone will be modern and professional, balanced with a friendly and approachable aesthetic.

8. Sitemap (Structure Overview)

Homepage ➡ Design Principles ➡ Types of Websites ➡ Website Examples

9. File Structure

The project files will be organised as follows:

- Index.html - Homepage
- CSS - Stylesheets
- W3CSS - dropdown navigation
- Images - Image assets and icons
- Videos - Links to youtube videos
- Docx - Links to reading training materials

10. Navigation

For Navigation we will make use of W3CSS-based dropdown menu integrated into the header for consistency across pages. Users will be able to access any section within one or two clicks.

11. Content Plan

- Informative text describing website types and design principles.
- Links to examples of website types for trainees to explore.
- Linked tutorial videos.
- Downloadable documents for additional learning.

12. Colour Scheme

Following BrightWeb's brand palette using the 60-30-10 rule:

- White (#F5F5F7) - Primary background for clarity and cleanliness.
- Green (#84BF2A) - Secondary colour symbolising growth and learning.
- Black (#21191D) - For contrast and readability.
- Lime (#CFF250) - Accent colour for buttons and highlights.

All colour choices comply with WCAG accessibility standards for contrast.

13. Style Guide

The website will use a clean, minimalistic appearance. Sharp edges, subtle shadows, and whitespace will provide a professional and user-friendly aesthetic. Icons and buttons will maintain consistent styling across the site to enhance usability.

14. Typography

Typography will use BrightWeb's preferred font family for legibility and brand consistency. Headings will use bold weights for hierarchy, while body text will remain clear and accessible.

15. Time Management

The estimated timeline for the project is as follows:

- Discovery and Planning: 4-5 days
- Design Development: Up to 7 days
- Build and Implementation: Up to 14 days
- Testing and Feedback: 3 days
- Launch: At client's discretion

The timeline can be viewed [HERE](#) and may be adjusted depending on client feedback and content delivery.

16. Technical Considerations

- Technologies: HTML5, CSS, and W3.CSS for responsive design.
- Hosting: Heart Internet.
- Security: HTTPS enabled.
- Accessibility: WCAG-compliant with alt text, high contrast, and keyboard navigation.
- SEO: Not applicable (internal-only site).
- Cross-browser compatibility: Fully tested across major browsers (Chrome, Edge, Safari, Firefox).

If there are any adaptations that the client wishes to make to this planning document please contact the team at your earliest convenience.
